

Dear Mr. Rorex,

I wanted you to know how grateful I am for the extensive Apprenticeship and Skill Improvement Program at the Local 150 Training Facility. It has enabled me to be a much more qualified engineering technician and has enhanced my job skills in the field. The training instructors have all been knowledgeable and helpful in their particular skill set.

I would particularly like to mention one of your Lab/Field Instructors, Ms Eva Urbanczyk, who recently developed and offered a new practical math skills refresher course and a preparatory HMA Level I course. These courses were of great benefit for those of us who have been out of school the past several years.

Ms. Urbanczyk has demonstrated over the past year and a half that I have attended school here, that she is a very good and patient instructor who is knowledgeable, bright and personable. She is extremely generous with sharing her time helping and tutoring myself as well as a multitude of other students in spite of her already busy work schedule.

It's always nice to acknowledge someone who goes the extra mile to help others. I recommend any student, especially those who struggle with certain classes to seek out such a solid instructor as Ms. Urbanczyk for any extra help or tutoring. She's a great attribute to the staff of the Apprenticeship and Skill Improvement Program.

Fraternally yours,
Paul Lyman
